Organising your research

Organising your research to comply with open science criteria from the outset guarantees the proper management of data, and that it is open, secure, shareable, and reusable.

To facilitate this work over the course of the project, it is important to address from the outset questions relating to data storage, organising and naming files, means available for encouraging cooperation between team members, documenting your data and methodology, making data secure, and setting up a participatory project.

How to :

Storing data

Sharing with your team

Making your data secure

Organising your files
Documenting your data
Setting up a participatory project
